

Rafael Achtenberg

Full-Stack Software Engineer

Porto Alegre, Brazil | +55 51 99702-6264 | achtenberg.rafa@gmail.com
linkedin.com/in/achtenrafael | github.com/Faelkk | Portfolio

SUMMARY

Software engineer with full-stack experience building and evolving scalable, data-oriented applications. Experienced in user interfaces and APIs, asynchronous processing, performance optimization, testing, and production monitoring. Interested in understanding problems beyond the code and turning them into simple, reliable, and maintainable solutions while working closely with product, design, and engineering.

PROFESSIONAL EXPERIENCE

Junior Software Engineer | Trilhante

Remote | Mar 2026 - Present

- Delivers end-to-end features, from technical definition through production follow-up, using TypeScript, Next.js, React, Node.js, C#, .NET, PostgreSQL, and Prisma ORM.
- Strengthened a codebase with more than 5,500 automated tests, including stabilization of a 100-scenario E2E suite, improved observability across CI/CD pipelines, and a 47% to 59% reduction in authentication setup time.
- Optimized PostgreSQL queries, indexes, and read/write operations in a database with more than 170,000 records, eliminating redundant access and reducing a critical routine's runtime by 32% to 48%.
- Developed asynchronous workflows with queues and jobs for long-running tasks, including persistence, automatic retries, and failure recovery.
- Implemented API-key authentication and access controls with server-side validation, authorization tests, and audit trails for sensitive operations.
- Instrumented events and errors with PostHog, handled file storage on Amazon S3, and maintained deployments and CI/CD processes on Vercel.
- Participates in code reviews, production troubleshooting, and release follow-up, contributing to the application's stability and continuous evolution.

Software Development Intern | Trilhante

Remote | Feb 2026 - Mar 2026

- Developed front-end and back-end features with TypeScript, Next.js, React, Node.js, PostgreSQL, and Prisma ORM.
- Built and refactored reusable components, improving responsiveness, dark mode, accessibility, and visual consistency.
- Implemented OAuth authentication, containerized applications with Docker, and used AWS services across development and release environments.
- Fixed bugs, maintained automated tests, and participated in code reviews, gaining autonomy before being promoted to Junior Software Engineer.

EDUCATION

Pontifícia Universidade Católica do Rio Grande do Sul

Associate Degree in Systems Analysis and Development

Porto Alegre, RS

Feb 2026 - Expected Aug 2028

TECHNICAL SKILLS

Front-end: TypeScript, JavaScript, React, Next.js, Angular, Tailwind CSS, HTML5, CSS, Figma, and accessibility.

Back-end: C#, .NET, Node.js, NestJS, ASP.NET Core, REST APIs, OAuth 2.0, Better Auth, Docker, Prisma ORM, Entity Framework, PostgreSQL, SQL Server, MongoDB, Redis, data modeling, asynchronous processing, workflows, queues, jobs, messaging, RabbitMQ, Kafka, WebSockets, AWS (EC2 and S3), GitHub Actions, CI/CD, Vercel, Git, unit, integration, and E2E testing, observability, and PostHog.

LANGUAGES

Portuguese: Native | English: Upper-intermediate (B2)
